Hiring Manager
Friday Media Group (FMG)
Bengaluru, Karnataka, India

Dear Hiring Manager,

I am writing to express my strong interest in the 6-month Software Engineer Intern position at Friday Media Group. As a computer science engineering student at Dr. Ambedkar Institute of Technology currently based in Bengaluru, I have developed a deep focus on backend systems, algorithmic problem-solving, and client-server architecture.

During my studies, I successfully designed and implemented a high-performance distributed search engine in C++ from scratch. This project required building an inverted indexing system, managing multi-threaded data processing, and optimizing memory usage to ensure low-latency query handling. These experiences have given me a robust understanding of scalable architecture, data flow, and networking protocols, which translates directly to the client-server principles utilized at FMG.

Beyond coursework, I am heavily engaged in competitive programming, consistently optimizing complex logic and data structures on platforms like Codeforces and LeetCode. I also maintain an active fork of the ArduPilot open-source repository, which has taught me how to navigate, debug, and contribute to massive, production-grade codebases. While your tech stack involves PHP and Java, my strong foundational grasp of object-oriented programming, data structures, and system design allows me to adapt to new languages and frameworks rapidly.

I am highly motivated by the prospect of joining a fast-paced environment where I can contribute to real-world products. I am available immediately for the hybrid role in Bengaluru and am committed to delivering the high-quality technical work necessary to earn a Pre-Placement Offer (PPO) with your team.

Thank you for considering my application. I have attached my CV for your review and welcome the opportunity to discuss how my systems engineering background aligns with Friday Media Group's goals.

Sincerely,

Kausthubh
